Do you know where your water comes from? Watersheds provide the fresh water that humans and fish, and lots of other creatures, need each day. Learn how to take care of the water in your watershed, and then spread the word!

A watershed is an area of land that drains to a particular body of water such as a river or a lake. Rain or any type of precipitation that falls anywhere in that watershed eventually flows to a body of water. The water may travel over land as surface water or flow underground as groundwater. Look around your community to see water traveling within our watershed.
